All these technologies are developed and maintained by IRIS. **We own 100% of the intellectual property**

IRIS[®]Xtract[™] Accounts Payable Capture Solution

Scan / Import

paper

electronic

All your invoices are imported:
scans, fax, emails, SFTP, your ERP,
etc.

Freeform extraction

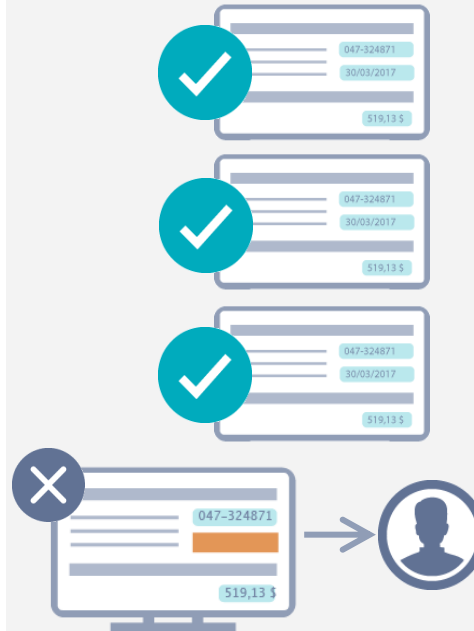

supplier

invoice number

line items, etc.

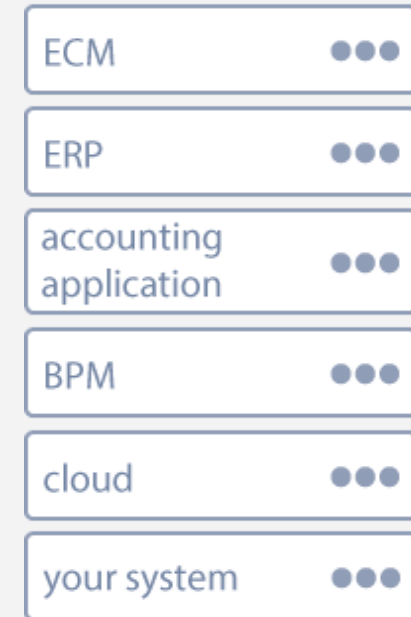

No template needed, all indexes
are automatically extracted.

Verification

Data is double-checked using an
extensive set of rules.

Export

Invoice data is automatically routed
to your system.

IRIS Xtract™ Accounts Payable innovation

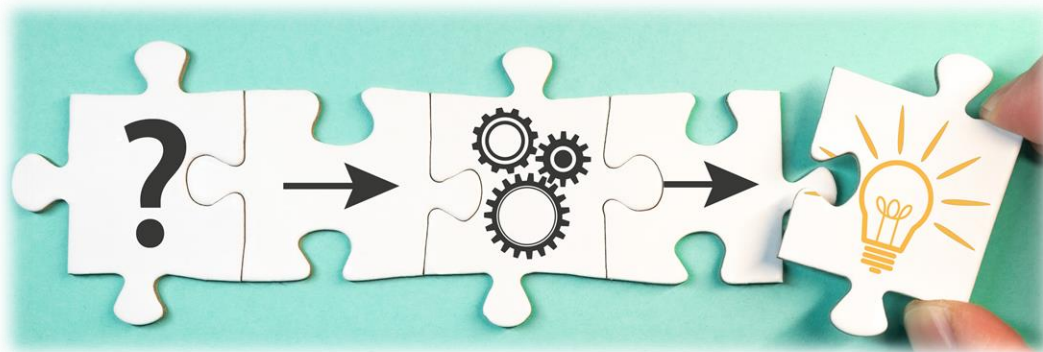

1. Support for different Training Modes
2. Flexible Amount Fields Decimal Settings
3. Use of VIES Web Service
4. Improvement of the AP Scripting interface

IRIS Partner Portal Update-Link: X4D 5.0 SPAP 8.0.2 (2021-04-13 14:00:14)

Support for different Training Modes

- Until AP V7 only a hard-coded Evaluation of Search Field, RegEx/Fieldformat without Spaces was possible
- Within AP V8 there are different Training Modes that can be combined:
 - Extracts text based on trained RegEx
 - Extracts text based on trained Bounding Box
 - Extracts text based on Search Field Settings of the trained Region
 - In Combination with or without Space Characters

Flexible Amount Fields Decimal Settings

- New ways of presenting “Amount fields”
 - Amount fields (field-type in Xtract) are replaced by decimal fields with the use of a Parameter to enforce the Decimal Length

Mennyiség	Nettó egységár	Nettó összeg	ÁFA összeg	%	Bruttó összeg
1 Éj	7 692	7 692	1 385	18	9 077
1 Ad	2 381	2 381	119	5	2 500
1 v.éj.	400	400	0	0	400
1	1 181	1 181	319	27	1 500
2 DB	622	1 244	336	27	1 580
ÖSSZESEN					15 057 HUF

Quantity	Price	Value
28	325,00000	9100,00
2	325,00000	650,00
200	3,45000	690,00

Total value: 10,440.00 EUR

Amount Handling Flexibility

Use of VIES Web Service

- Sales tax IDs can now be validated and used to complete the Supplier Information via the VIES Web Service (VIES VAT Number Validation) provided by the European Commission
 - Validation works for all member states of the European Union but the Details of Suppliers are not available for all Countries.
- Seperate UK Validation Service will be included in the next Update of the AP Package

Improvement of the AP Scripting Interface

- Restructuring of the used code to a new common Architecture
- Results in a big change of the Scripting interface
- Adding functionality to change AP parameters at runtime
- Will be sharded in the future with all AP packs
- Not touching the Platform Scripting Interface

IRIS Xtract™ AP latest Innovations

- Easy Training Handling
- Flexibility on using decimal on Amounts
- Possibility to use VIES (VAT Number Validation of the European Commission)
- Much easier to Support in case of Customizing
- Will be the Base for all new Improvements
 - UK VAT Number Service will be included in the next Version

IRIS Solutions for anonymizing data and privacy protection

Speaker(s): **Olivier Deschuyteneer**

REGISTER NOW

Anonymizing data in order to protect our privacy is becoming increasingly important in nowadays business world. The GDPR compliance rules have to be respected, in order to insure the protection and the consistent free flow of personal data. Especially when it comes to the recruitment processes **anonymizing data can be used to hide sensitive information** and guarantee an objective recruitment procedure. Furthermore, documentation has to be hidden in the payment process of a company, where only authorized personnel should have access to the salary statement of the employees.

We at IRIS believe that these kind of challenges within an organization can be solved by using smart software, that is enabling a smooth working processes by protecting personal data. This webinar will be about how our solutions can help you to deal with anonymizing data for privacy protection in a clear and effective way.

A demo will give you more insights into using our solutions very easily.
